

Dear Ladies and Gentlemen,

today you receive the third edition of our TRANS³Net-Newsletter. During the summer months happens a lot on our website <http://trans3net.eu>. Since beginning of June the TRANS³Net-Portal is new. On this online portal you can find not only the map of transfer promotors but also information about interesting events in the TRANS³Net-project region where the exchange between science and economy also across the national borders is the primary focus. The planning of our own transfer format events, inter alia TRANS³Net.training and TRANS³Net.visit are in progress. In November we start with the first visit of a large research institution on the Czech side and with a two day training for transfer promotors. Up-to-date information to all events are on our website or on our [Trans³Net-Facebook-page](#). So it's always worthwhile to visit our website.

Furthermore we will invite all partners to use this newsletter as a platform to inform about upcoming events and news around the knowledge and technology transfer. This information will also be published on our website. Please send us your concerns to office@trans3net.eu.

Consultation of policymakers to the TRANS³Net strategy starts

“In the year 2025 the trinational border region Saxony, Lower Silesia and the Ústí-district is characterised by a lively exchange of knowledge and new technologies. Polish, Czech and German universities and research institutes are working jointly together to bring latest scientific findings and technologies into practice and industrial use to the benefit of European firms.”

To reach this vision, the project team under the workpackage-leadership of the the project partner WARR (Wroclaw Regional Development Agency) has elaborated a strategy for a transnational cooperation network of transfer promotors. This strategy will be used in August and September for a consultation of regional policymakers in all three countries. The project team expects from the questioning hints and indicators to the prospective organisation as well as the institutional and financial framework conditions of the transnational cooperation network of transfer promotors.

CATPRO/ UniCRE: Calls for projects

UniCRE is one of the most important research and development facility in Ústí region. Its specialization is applied and basic research in the field of industrial chemistry. The facility is very well equipped and widely opened for any kind of cooperation with partners from Germany and Poland. These partners (organizations but also individuals) have a great opportunity to use the capacities of the modern equipment free of charge. For a specialized part of the facility called CATPRO (Efficient Use of Energy Resources Using Catalytic Processes) there is now opened (so called) Calls for projects, through which the organizations, individuals etc. can present their interest for cooperation and free of charge usage of the capacities of these research facility. You can find further information under www.unicre.cz/en/calls-for-projects.

Save the Date: Strategy-Workshop on 10 October in Wrocław

Figure: Venue at the University of Science and Technology in Wrocław.

On 10 October 2017 the workshop „strategy for a transnational cooperation network of transfer promotors” takes place from 9 am to 3 pm at the Wrocław University of Science and Technology. Target of the workshop is it to collect final inputs for the strategy of the intended network, discuss about objectives and framework conditions and to receive feedback from policymakers of all three regions. At the end the strategy should be approved to go further with the implementation of the project aim.

Interested parties can register for the workshop with an email to office@trans3net.eu. More information to the schedule and venue you can find under www.trans3net.eu.

The strategy-workshop is part of the framework programme of the DRESDEN-concept science exhibition that takes place from 22 Sept until 11 Oct in Wrocław. More to the DRESDEN-concept science exhibition under www.dresden-concept.de.

Registration: Become part of the network of transfer promotors

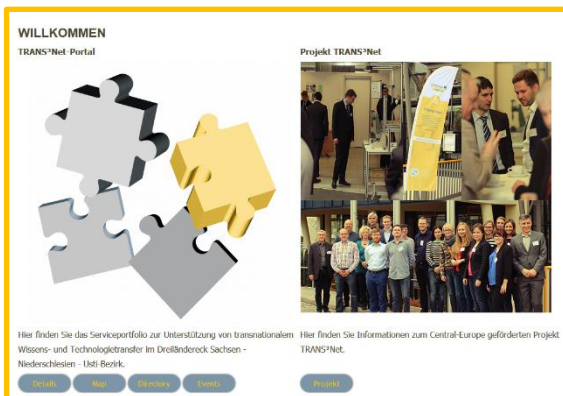

Figure: New TRANS³Net-Portal. (© CIMTT)

Every network needs participation to live. More than 60 transfer promotors from the three countries are already presenting themselves with their transfer service in our map of transfer promotors, including universities, research institutes, companies, public institutions and associations. Interested institutions and persons who offer services in the placement between science and economy or in the contact initiation, are always welcome to become part of the network of transfer promotors. The registration is further online available. You can choose between the online registration tool or the word-document. The questionnaire can also be downloaded. Both possibilities are specified under www.trans3net.eu in the TRANS³Net-Portal under the menu “registration”.

Events: Number of interesting meetings for cooperation in autumn

In autumn you are spoilt for choice if you are interested in establishing contacts in the field of knowledge and technology transfer. A various number of events are awaiting scientists, entrepreneurs and transfer actors in the TRANS³Net project region. On 22 September you must decide for example if you want to travel to Wrocław to the saxon-polish innovation day „electro mobility and R&D-networks as driver for innovations“ or to Chemnitz to the symposium “cross-border cooperations” of the Saxony State Ministry of Economy, Labor and Transport.

The first TRANS³Net-event „TRANS³Net.visit“ takes place on 9 November 2017 in Litvinov, Czech Republic. The first of two „TRANS³Net.trainings“ are from 15th to 16th November 2017 in Usti und Saxony. Infos about all upcoming events you can find in the [TRANS³Net-Portal](http://TRANS3Net-Portal) under events or under [events](#) on our project website.

Follow us on our [website](#) and on [facebook](#) to stay updated.
